

Vibe Coding Prompt: Reading Buddy (Friendly & Approachable)

The Goal: Recreate the UI for a web application called **Reading Buddy**. The app helps college students track leisure reading to protect their reading momentum against heavy academic workloads.

Aesthetic & Atmosphere:

- **Vibe:** Friendly, soft, cozy, and approachable—like a neighborhood bookstore or a personal library.
- **Color Palette:** Use a warm "Bookstore" theme. Background is a soft cream (#FDF8F2). Primary accents are soft sage green, terracotta, and a muted "Action Blue" for the active state of the current tab.
- **Typography:** Use a high-quality, elegant serif font (like Merriweather or Playfair Display) for titles and book names to give it a literary feel. Use a clean, legible sans-serif (like Montserrat or Open Sans) for form labels and data.

Layout & Components:

- **Header:** Place the title "Reading Buddy" at the top, center-aligned.
- **Navigation:** A horizontal tab bar with four options: **Log Reading**, **My Books**, **Reading Goals**, and **Settings**.
- **Styling:** * Use high corner-radius (pill-shaped or very rounded corners) for all buttons and cards.
 - Apply soft, diffused "paper-like" shadows to create depth without harshness.
 - Input fields should be rounded with subtle borders.
- **Main Interaction:** On the **Log Reading** tab, feature a "Log Your Reading Session" card.
 - Include fields for **Book Name** and **Pages Read**.
 - Place a prominent, rounded **Quick Log** button at the bottom.
 - Display the **Estimated Completion Date** clearly below the inputs.

Structural Truths (Do Not Deviate):

- Maintain the information architecture from the sitemap: **My Books** contains **Add Book**, **Currently Reading**, and **Completed Books**.
- **Reading Goals** should display a clean table showing Book Name, Pages Completed, and Estimated Date Completed.
